

## Use Viral Passive Advertising!

This is not brain surgery, but it does take using a little synergy to put a few pieces together to get what we all want, to make money online without chaining yourself to the computer!

No matter what you promote online to make money, you need traffic you can send to some website to get them involved. Most people new online, get it with traffic exchanges and spend hours clicking away to get enough hits to make a difference. It takes thousands!

People surfing or clicking online don't see anything except what will cure their pain! If you've been doing this for very long, you understand that clicking boring ads is one of the more severe pains, so we just show them an eye catching splash page that holds the solution to their problem and they end up reading this report, just like you are. They weren't going to see my opportunity anyway!

As other marketers realize that this is brain-dead simple and become your referrals, you get them to help you keep the traffic machine rolling as they build their own passive system.

My goal is getting things other people pay for, by earning my way in free! The splash page you probably saw is hosted with [Angry Hosting](#) where you can get an account for only One Dollar a month. Then as other people read your report like this, all you need are two of them to recognize the screaming bargain \$1 a month is and yours is paid for from commissions.

### **So how does that help advertise your opportunities?**

I currently use three [Social Advertising](#) websites that are free to enroll in and produce high quality traffic, because they are filled with people serious about earning online and not just those exchanging credits to get their own offer seen. I run a [splash page](#) in each one to get people to download this report. That builds me a viral list virtually free by paying it's own way. In fact it has produced a small profit that I can use for other promotions.

The list I build is one you should use to do your list building, because it gets others to help! Why do all the work yourself? By using [Work For 3 Dollars](#) for a one time \$3 to start, this simple report builds it exponentially with no further effort on your part, while it stuffs cash in your AlertPay account. My \$3 has grown to \$450 at the time I wrote this and my list is now over 2,400 I can email help to weekly. That creates Passive Income and Growth!

Notice I said I email them help, not ads. The truth is, now that I have been emailing them for over a year and they realize my content has value, I CAN include an ad once in a while that makes us both more money and they actually respond to them.

Each person that enrolls after they read this, can use the same method to get a few more that will follow in our tracks, once they learn how and realize that the magic of simple viral promotions like this works. Now it grows exponentially on it's own, with people working for you that you never even see.

**Lots of viral promotions fail, simply because they don't have a splash page and report that work as well as this one does. You downloaded it, didn't you?**

You may be saying that since I have to click websites to get my splash page seen, it's not really passive at all. Here's my logic, I DON'T click those websites to have my splash page seen, I click them 10 minutes a day to MAKE lots of MONEY and having my page seen is a side benefit I get free, with NO FURTHER EFFORT.

I hope by now you recognize the concept that when you solve a tough problem for someone, they're probably in the best frame-of-mind to listen to what else you can do for them. I'll teach you how to create all these reports and splash pages you want absolutely free and you can put them on your Angry Hosting account for others to read.

So can you see the power in this simple viral passive system?

Sure you can change anything you think you have a better idea for, I'm just giving you what I do. You can get Open Office absolutely free and follow the model using anything you like. Now doesn't that beat the pants off of any downline builder system that forces you into programs someone else picked for you? I HATE THAT!

Thanks for your time and save this to your desktop for later study.
